

September 22, 2016

To Whom It May Concern,

As evaluated and reported by the Department of Health and Human Services (FDA) in their letter dated 29 July, 2009, ITW Thermal Films products B220, B121, B128, B112, P110, and P110W are certified for use in conjunction with approved direct food contact marking and coding applications, when utilized in an appropriate manner for their intended use.

Because the submission process requires that ITW Thermal Films divulge proprietary information, it is not possible to reference the actual Center Tracking System (CTS) in any of its correspondence.

ITW Thermal Films certifies that all of the ingredients in the aforementioned products have been verified to be GRAS (Generally Regarded As Safe) and non-migratory by the FDA and thus suitable for use in applications requiring direct food contact.

In terms of FDA compliance, this is the strongest endorsement the FDA gives that an item is safe to use on or in an application.

Sincerely,

A handwritten signature in blue ink, appearing to read 'C. Beecher', with a long horizontal flourish extending to the right.

Charlie Beecher
